Woodland Wildlife

Kitimat Museum & Archives Wildlife Teaching Programme

Woodland Wildlife

Birds and Animals of the Kitimat Valley Teaching Programme

There are many Birds and Animals that make their home in the Kitimat Valley forest. The forest is an ecosystem. Forests are full of living and non-living things that depend on each other. Trees, ferns, and shrubs grow in the forest. Insects, birds, deer and bears are some of the forest animals that need these plants. Water, stones, and soil are nonliving things that animals need too. These are concepts that will be explored in this teaching programme.

Creatures that can be found in the wild and on display at the museum will be identified. The concept that all living things in ecosystems are part of a food chain and a food web will be introduced. *“A simple forest food chain might be: the sun shines on leaves, caterpillars eat the leaves, a bird eats the caterpillar, and a fox eats the bird. Most food chains are linked to other food chains in ecosystems together they form a food web of life.”*

If you decide to have this programme in your classroom, two or three volunteer docents will arrive at your classroom a few minutes before the programme is scheduled to begin. The volunteers will set up the technical equipment and organize the artifacts. Once they are ready to begin they will introduce themselves and the programme they are presenting.

Objectives:

At the end of this program, the participants should:

- say that they have enjoyed the museum’s visit to their classroom.
- be able to identify several birds and animals that live in the Kitimat Valley.
- be able to describe an ecosystem
- be able to describe a food chain and food web.

Timing:

Introduction: 5 minutes

PowerPoint 20 minutes

This presentation is primarily photographs taken from the museum collection and the internet showing Birds and Animals that live in the Kitimat Valley, explaining what animal they are, if they are Producers, Primary or Secondary Consumers and how they are interdependent.

Hands on Activities 20 minutes

- Bear aware—examine a bear skull and talk about what to do if you see a bear, how to avoid encountering bears in the wild and in town,
- Animal bones and skulls—examine the bones and skull of several small animals
- Animal skins—examine the pelts and parts of animals talked about in the presentation.
- Paws and Claws—play a game of matching paw/hoof prints to the animals.

Q&A/Cleanup 5 minutes
